Context:

Working with INNOVA S.p.A. means being part of a pool of over 140 senior consultants and experts who have developed a long-standing and consolidated knowledge in the R&D and marketing activities conducted with highly-qualified European Companies and Universities. INNOVA S.p.A. operates in five major technology sectors in which growth and development depend strongly on the use of new technologies: information and communication technologies (ICT), renewable sources of energy, intelligent industrial systems, nanotechnologies, and biotechnologies.

The ICT department **has opened a position** on development of relevant solutions for collaborative recommending, discovering, linking and accessing added-value services available on the Web - in order to derive new information and knowledge that could be exploited in multiple application settings to carry out new activities or to improve the way current tasks are performed - with particular emphasis on reputation - and trust-based mechanisms.

Background and Role:

The selected profile should thus have **strong software development skills** for the development of Web-based application, and possibly prior experiences in developing applications using Open Source related technologies. INNOVA S.p.A. employed will be working as part of multi-disciplinary team of dynamic researchers in the field of knowledge technologies, Web applications, mobile technologies, intelligent industrial systems, in the context of National and European R&D Projects.

Essential Skills:

- Strong Software and Web Development Skills using Java.
- Strong Database Administration Knowledge using MySQL.
- Design and Implementation of practical Web-based and Mobile applications.
- A team player, excited by working in a cross-disciplinary team, and able to give and receive constructive feedback.
- Initiative and ability to work independently, managing your own research.
- Verbal and written communication skills in English.

Desirable Skills (these skills will be an added advantage):

- Familiarity with Internetworking Troubleshooting.
- Familiarity with existing Open Source Development Tools.
- Good Familiarity with Web-based Scripting Languages.
- Good Familiarity with Project Design and Modeling.
